New Appointments at Portalify

Portalify Strengthens Its Technology Team

Helsinki, Finland -- November 7, 2005 -- **Portalify Ltd**, a Finland-based software company focused on wireless data services for public safety users, today announced the addition of two new members to the company's technology team.

Mr. Jussi Tella, 34, has been appointed a Senior Software Developer. Mr. Tella holds an M.Sc. degree in computer science from the Helsinki University of Technology. He has previously worked as a project manager at Center for Scientific Computing. Mr. Tella is also one of the highest-rated chess players in Finland and a FIDE International Master and an author of several books.

Mr. Aapo Rista, 34, has been appointed a Software Developer. Mr. Rista holds an B.Sc. degree in computer science from Helsinki Polytechnic. He has previously worked for the Helsinki City Library and as an entrepreneur developing mobile and positioning software.

"We are thrilled to add to new senior members to our team," says Mr. Petri Kaurinkoski, the Chief Operations Officer at Portalify. "Jussi and Aapo will be key members in our technology team developing new services and applications for our safety and rescue and other public sector customers."

About Portalify

Portalify Ltd is a Finland-based software company focused on wireless data services for public safety users. Portalify solutions for TETRA networks enable services such as instant individual and group text messaging, as well as fast mobile access to key databases regardless of user location. Multi-channel technology complements TETRA communications with other mobile networks where necessary, thus ensuring that the information is always delivered. In Finland, Portalify solutions power numerous key applications used daily by police officers in the field. Other Portalify customers include public sector organizations such as safety, fire and rescue services, as well as major telecom operators and content providers. Based in Helsinki, Finland, Portalify is an independent, growing company rated AAA by Dun & Bradstreet.

About TETRA

TErrestrial Trunked RAdio (TETRA) is a digital trunked radio standard developed by the European Telecommunications Standards Institute (ETSI) for highly demanding professional mobile radio applications. TETRA networks, used in over 70 countries, are built to replace a range of obsolete and insecure radio communications systems previously used by public safety and government organizations. With its unique combination of mobile phone and radio handset technology, combined with wireless data services, TETRA safeguards reliable voice and data communications for public safety officials in all situations. Versatile, instant voice and data communication to groups, as well as the prioritization of communications, are essential to field personnel and operations management in fast-moving situations. Direct handset-to-handset radio connections enable communication even without a base station network, while data services provide users with quick and direct access to key databases from their terminals.
